Redes Neurais e Deep Learning

REDES NEURAIS CONVOLUCIONAIS INTRODUÇÃO

Zenilton K. G. Patrocínio Jr zenilton@pucminas.br

Exemplo: Imagem 200×200

40K Neurônios

Exemplo: Imagem 200×200

40K Neurônios

~1,6B parâmetros !!!

 Técnicas de filtragem podem ser utilizadas para extração de informação de interesse em um determinada imagem

- Técnicas de filtragem podem ser utilizadas para extração de informação de interesse em um determinada imagem
- Filtragem de imagem pode ser feita:
 - No domínio do espaço
 - No domínio da frequência

- Técnicas de filtragem podem ser utilizadas para extração de informação de interesse em um determinada imagem
- Filtragem de imagem pode ser feita:
 - No domínio do espaço
 - No domínio da frequência
- Filtros Espaciais Lineares calculam o valor resultante de cada pixel como uma combinação linear dos valores de pixels em uma vizinhança local do pixel na imagem original

O processo de filtragem normalmente é realizado por meio de matrizes denominadas máscaras (ou filtros) em que cada posição está associado um valor numérico chamado peso ou coeficiente

O processo de filtragem normalmente é realizado por meio de matrizes denominadas máscaras (ou filtros) em que cada posição está associado um valor numérico chamado peso ou coeficiente

Os coeficientes do filtro são multiplicados pelos valores dos pixels correspondentes e então somados, substituindo o valor do pixel central

$$* \begin{bmatrix} -1 & 0 & 1 \\ -1 & 0 & 1 \\ -1 & 0 & 1 \end{bmatrix} =$$

$$(f * g)(x,y) = \sum_{i=-\infty}^{\infty} \sum_{j=-\infty}^{\infty} f(i,j)g(x-i,y-j)$$

$$f[\cdot,\cdot] = \frac{1}{9} \begin{bmatrix} 1 & 1 & 1 \\ 1 & 1 & 1 \\ 1 & 1 & 1 \end{bmatrix}$$
